

About Us

LCO Technologies often recognizes industry-wide problems & creates innovative solutions to solve them. Through the innovation & optimization of existing technology, our products offer modern benefits & interaction without the cost & hassle that comes with the replacement of legacy assets.

Our Product

The Chemical Test Kit

Eliminate the Risk

Reinstate your confidence in a clean seal with our **Chemical Testing Kit**. Built to test the compatibility of your chemical blend with our O-Rings, we offer two tests to determine chemical compatibility and help your pump remain secure and leak-free out in the field.

Chemical Compatibility: The One N' Done

Designed to withstand nearly every chemical compound in the field, our **One N' Done** packing offers a universal solution to all your material compatibility concerns. Forget the days of stuffing vee rings into your fluid ends, with our packing you can just push it in and our design will take care of the rest.

Test It Yourself

A little weary of trying something new? That is exactly what our **Chemical Testing Kit** is for. With our XF1 and XF2 O-Rings included in the Chem Kit, you can test the chemical compatibility and our One N' Done packing to see how it reacts with your chemicals. For more information, contact us at the phone number and email listed below.
