

About Us

Rooted in our core values at LCO is the recognition and solving of industry wide challenges. Through innovation and optimization we create products that will not only provide a modernization of your existing assets but allow for the cost effective integration of technology with both familiarity and reliability that your operations require.

The One N' Done

Introducing the One N' Done Packing, the first cartridge-style pump packing designed to withstand all chemical compounds in the field. Being universally compatible, it eliminates the need to choose between different vee packings.

Innovation

The Nitrided Plunger

The Nitrided Solution

Looking for a reinforced stainless steel plunger? Our chemical injection pump uses a plunger that has undergone an **advanced chemical bath nitriding process** that hardens the surface and integrates itself within the material. Less susceptible to damage from particles entering the system, our nitrided plungers ensure reliable performance.

Increase Your Durability

Forget the days of rapid replacements - with our innovative plunger, the lifespan is significantly extended compared to your average stainless steel plunger. The **increased durability** allows for a reduced risk of damage from system contaminants and a hardened surface that is perfect for our One N' Done Packing.

Optimal Performance

Our nitrided plungers have been designed to provide optimal performance for your **LCO Chemical Injection Pump**. With an extended lifespan and increased durability, this innovation offers only the best quality. Contact us today for more information.
