

Needle Valve (HB Series)

www.panamengineers.com

Introduction

PANAM “HB” Series Needle Valves are specially designed and manufactured for use in rugged, corrosive & hazardous environments. Valves are used in process control, instrumentation and flow control applications. Valves are precision machined, designed for durability and maximum efficiency and provide high quality, low cost alternatives used in a wide variety of fluid and gaseous control systems.

PANAM strives to exceed the exacting standards of our growing and demanding customers.

PANAM “HB” series needle valves are available in high grade stainless steel, carbon steel, brass and monel materials in variety of end connections includes male / female threaded NPT, BSP, BSPT, ISO, DIN and JIS tapered pipe ends.

Valves can be supplied to meet current revision of NACE MR01 - 75 (Sour Gas Service)

All Valves are 100% factory tested and complete traceability is available upon request.

- API ISO 9001:2008 Certified
- API ISO TS 29001 Certified
- API Spec Q1 Certified
- API 6A Certified
- API 6D Certified
- API 600 Certified
- API 602 Certified
- MFG. Facility Approved by ABS Ind.
- ASTM F1387-99
- Leak Test Approved by TUV
- CE Marking

Features & Benefits

Non Rotating Vee / Ball Tip Design:- Which forms a bearing joint with the stem eliminates rotation between plug & seat at closure, This prevents scoring and galling up the valve seat and ensure long life in repetitive shut off service.

Safety Bonnet Lock:- Prevents accidental disassembly.

Stem Thread Rolled & Hard Plated:- Provides additional strength & maximum service life.

Mirror Finish Stem, Furnished to a 16RMS:- Extends packing life and smooth stem operation.

Adjustable Packing Below Stem Threads:- Prevents stem lubrication washout and isolate threads from process contamination.

Safety Back Seating:- Provides secondary stem seal in full open position, prevents stem blow out.

Stainless Steel Handle:- For proper actuation.

Body to Bonnet Seal:- Metal to Metal constant compression, isolate bonnet threads from system fluids and eliminates possible tensile.

Dust Cap:- Prevents contaminants and lubricant washout of bonnet assembly.

Pressure & Temperature Ratings

PANAM Valves comply with ASME standard B16.34-2004 for valves with threaded and welding ends. These tables must be used in accordance with ASME standards, The user is advised that a valve must be used under jurisdiction of the ASME boiler and pressure vessel code, ASME code for pressure piping, and Canadian governmental regulations and is subject to any limitations of that code or regulation. At temperatures over 1000°F. Material shall have a minimum carbon content of .04% or higher to the maximum allowed for ASTM grade A479-316

Testing

Each valve is hydrostatically tested in accordance with MSS-SP-99. This procedure includes testing of the body cavity. Hydrostatic test is performed with pure water or other liquids of similar or lower viscosity at 1.5 times and seat leakage test at 1.1 times of the maximum working pressure.

Each valve is also tested with Nitrogen Gas at 1000 psi for seat, seal and shell leakage.

Other tests like Vibration, Temperature, Helium are available upon request.
